

- The tour deletion process is not working.

- After quickly closing an availability, it cannot be reopened.
- When opening availability in the calendar, it allows setting a passenger capacity higher than the tour's actual capacity (For example: the tour capacity is 5 people, but it's possible to create an available date with a capacity of 8 people).

- When booking a tour as a partner, if the first selected date has no availability and you then change the date, the system does not refresh automatically. Even when selecting a date with availability, it still shows the message: 'No departures available for this date. Please select another date.'
  - Ideally, when opening the calendar to select a tour date, the calendar should display only the dates available for booking.
-

- Within an existing booking that has already been submitted, I would like to be able to modify it by adding one or more passengers, up to the tour's maximum capacity. (Edit Booking)
